

KN-297 Laboratory animal's ID marker

Opppen

Can be used on the tail and skin of mice and rats

- Available in five colors.
- Capable of marking the tail and skin of not only albino mice but also colored mice such as C57BL/6.
- Animal-safe inks are used.

The method of marking the tail with Opppen is suitable for short-term identification. Compared to ear-punching or ear-marking, which involves cutting the animal's ears, this method is less stressful on the animal and easier for the experimenter.

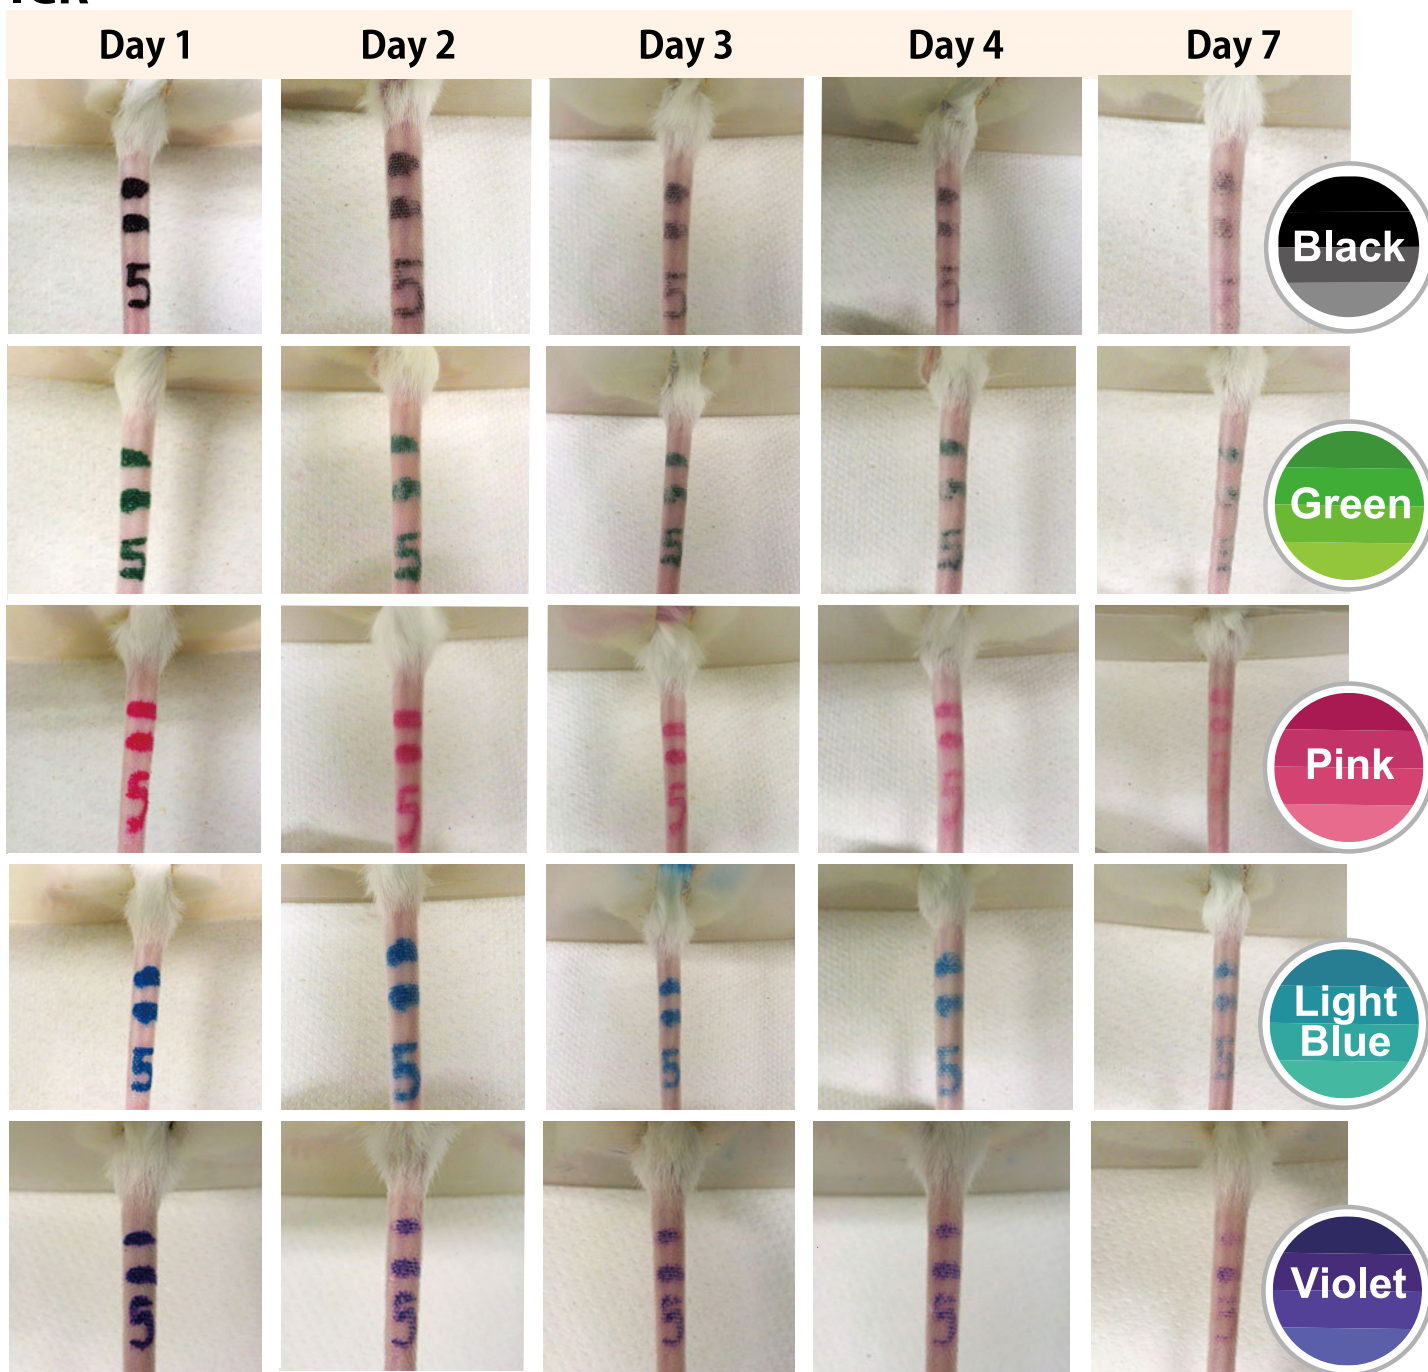

Cat No.	Product Name	for Albino Animals	for Colored Animals
KN-297-B-6	Opppen Black [6pcs/pac]	○	○
